Structural Mechanics 3

Information:

Course Code: SCM 411 Level: Undergraduate Course Hours: 3.00- Hours

Department : Department of Structural Engineering & Construction Management

Instructor Information : Title Name Office hours Lecturer Dina Muhammad Fathy Ors 30

Ahmed Taher Abdelhamed Mohamed Yousef

Area Of Study:

Teaching Assistant

ÁDeterminate the deformations and internal forces for different structural systems using the stiffness method

Description:

Elastic buckling of columns and beam columns, Stresses in circular plates under ax symmetric normal loads, Stresses in rectangular plates, Membrane stresses in shells of revolution and cylindrical shells.

Course outcomes:

a. Knowledge and Understanding: :

- 1 basic matrix formulation of the stiffness method
- 2 flexibility and stiffness matrices

b.Intellectual Skills::

 Developing an understanding of the basic concepts of the stiffness method, and its application in the development of computer software packages for the structural analysis of structures

c.Professional and Practical Skills: :

1 - Development of a deep insight into the "stiffness" technique generally used in software packages for the analysis of structures, and the way these packages work

d.General and Transferable Skills::

1 - Applications of the stiffness method
